## New iLoq solutions at Ifsec2009

During Ifsec 2009 exhibition iLoq - the winner of the IFSEC Security Industry 2008 "Physical security product of the year" as well as the "Detektor International Award 2008" - will introduce new locking solutions based on the self-powered iLoq C10 cylinder and the battery-less electronic iLoq K10 key.

"At Ifsec 2009 we are going to show the extended possibilities of our awarded iLoq S10 locking system." says Michael Szücs, Director Sales & Marketing of iLoq Oy. "We are going to introduce the iLoq on-line access management concept. The new iLoq on-line cylinder will enable real time administration of locks. Lost keys can be blacklisted and lock information be managed via an on-line connection. The on-line key programmer will make remote key programming at selected programming hot spots possible."

iLoq is exhibiting also the iLoq R10 key reader for easy control of peripheral systems by the iLoq key. The same iLoq key used for opening doors is used as an identification object to activate additional applications like elevators, parking barriers, or alarm systems.

Furthermore iLoq presents the iLoq padlock and iLoq key tube enabling widened application possibilities of the iLoq locking system.

*iLoq Oy develops, manufactures and markets advanced high security electronic locking solutions integrating modern mechatronics with communication and software technologies. The iLoq locking systems offer superior keying, maintenance, lifecycle and cost benefits whilst saving environment. The solution enables customers to upgrade security by replacing mechanical locking with digital high-security. In year 2008 iLoq won two of the most important international security awards, the "IFSEC Security Industry 2008" award as well as the "Detektor International Award 2008". Additionally iLoq won the INNOFINLAND Prize of the President of the Republic 2008. For more information visit [www.iloq.com](http://www.iloq.com)*
