## iLoq introduces new products and system features

iLoq introduces new features and product options of the awarded iLoq S10 locking system based on the self-powered iLoq C10 cylinder and the battery-less electronic iLoq K10 key at exhibitions in Denmark (Sikring& Sikkerhed 22.-24.09.2009, Odense), Finland (FinnSec 7.-9.10.2009, Helsinki) and Sweden (Sectech 21.-22.10.2009, Stockholm).

“The new product options and system features widen the application possibilities of the patented iLoq locking system offering advanced security and convenient access management for master-key locking as well as access control environments.” says Michael Szücs, Director Sales & Marketing of iLoq Oy.

The new **Time Restriction** feature as an option enables definition of time limited key validity or setting of key expiry time and date. The new **Automatic Key Overwrite** eliminates old or lost key access rights by simply inserting the new key first time. This feature, especially developed for management of apartment houses, enables secure and convenient handover of keys. When new inhabitants of an apartment enter their key first time automatically the access rights of the keys of the previous inhabitants become invalid.

The new **iLoq padlock** and **iLoq cam lock** enable easy lost key elimination, audit trail recording as well as multi-site management in new application areas. The iLoq pad lock makes it possible to use the iLoq S10 locking system also for securing remote objects and locations. The iLoq cam lock has been developed to control and monitor access to objects like medicine cabinets, lockers, safes and furniture. The earlier introduced **iLoq network module** enables programming of locks and key programming over the Ethernet network. For example main entrance doors or key programming hotspots can be managed on-line.

*iLoq Oy develops, manufactures and markets advanced high security electronic locking solutions integrating modern mechatronics with communication and software technologies. The iLoq locking systems offer superior keying, maintenance, lifecycle and cost benefits whilst saving environment. The solution enables customers to upgrade security by replacing mechanical locking with digital high-security. In year 2008 iLoq won two of the most important international security awards, the “IFSEC Security Industry 2008” award as well as the “Detektor International Award 2008”. Additionally iLoq won the INNOFINLAND Prize of the President of the Republic 2008. For more information visit [www.ilq.com](http://www.ilq.com)*
